
New Gas Consortium (NGC)

Powering Angola's gas future

The New Gas Consortium (NGC) is a landmark project for Angola and a cornerstone of Azule Energy's gas portfolio. As Angola's first non-associated gas development, NGC represents a major step in the country's journey towards energy diversification, increased LNG exports and a more sustainable energy future.

Operated by Azule Energy, NGC was developed to unlock Angola's offshore gas resources and supply natural gas to the Angola LNG facility in Soyo, supporting both international LNG exports and domestic energy needs.

Key facts

NGC was developed to:

- Monetize Angola's non-associated gas resources
- Supply gas to Angola LNG
- Support domestic energy requirements
- Reduce flaring
- Strengthen Angola's position in the global gas market

Partners:

Cabinda Gulf Oil Company (Chevron)
Sonangol E&P
TotalEnergies

Offshore development

Quiluma and Maboqueiro Fields

The NGC project sources gas from the offshore Quiluma and Maboqueiro fields, located offshore Angola.

These fields form the backbone of the development and provide the natural gas that is processed through the NGC infrastructure before being supplied to the Angola LNG plant.

Plant capacity

- Approximately 400 million standard cubic feet of gas per day (MMscfd)
- Approximately 20,000 barrels of condensate per day

Supplying Angola LNG

One of NGC's primary objectives is supplying natural gas to Angola LNG (ALNG).

This integration enables:

- Increased utilisation of the ALNG facility
- LNG exports to international markets
- More efficient use of Angola's gas resources
- Greater long-term sustainability of the LNG business

Supporting Angola's Energy Transition:

The NGC project plays an important role in Angola's broader energy strategy.

Benefits include:

Energy Security

Providing a reliable source of natural gas for domestic and export markets.

Lower Emissions

Reducing flaring and improving the utilisation of natural gas resources.

Economic Development

Creating jobs, supporting suppliers and generating long-term value for Angola.

LNG Growth

Supporting the continued operation and optimisation of the Angola LNG facility.
